COLOUR OPTIONS

Premier Glass Panels available in White, Black or Red.

ACCESSORIES

Thermostat controllers and Receivers sold separately.

BENEFITS OF USING INFRARED HEATING

Reduced energy use. Save between 30 - 60% of the energy usage of traditional heating methods.

Infrared heating does not heat the air but the fabric of the building.

There is **less damp and mould** because infrared heating warms walls and keeps them dry.

Infrared heating is 100% natural for our bodies and well being.

No maintenance or service required, unlike water or fan assisted heating which require inspection and service.

100% smart controlled to ensure you only heat the space required at any time.

Professional installation recommended.
